Digital Signage for Airports	26

Digital Signage for Airports

Growing middle-income households in Asia, Africa, South America, and other developing economies, are driving increased demand for air transport. Further, cheaper airfares offered by low-cost airlines operating fuel-efficient airplanes have made air travel more accessible than before. Presently, experts project that no fewer than 200,000 flights will take off and land at airports worldwide every day by the mid-2030s.

With the rise of air travelers, digital signage can deliver a powerful customer services experience by reducing delays and traffic, making the travel experience efficient for guests and staff, and boosting overall sales for airports.

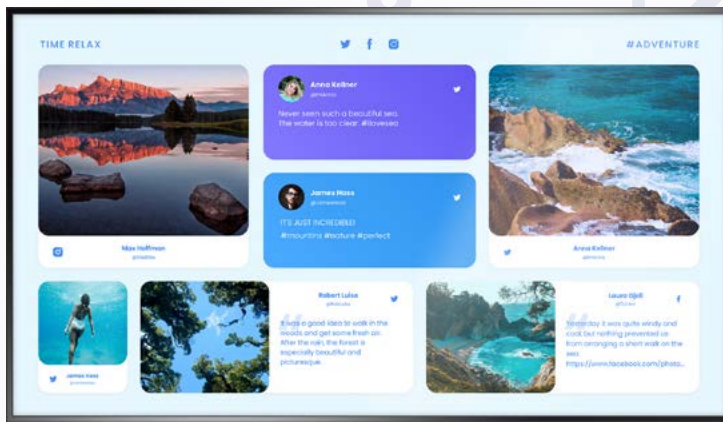

Rising Issues in Airports the Importance of Digital Signage

Modern airports across the world face many problems. First, global congestion is set to increase, as the International Air Transport Association (IATA) expects [7.2 billion people](#) to take to the skies in 2035, compared to [3.7 billion travelers](#) in 2016. After two years of limited traveling due to the COVID-19 pandemic, people are keen on flying again for adventure and business.

Crowding at security checkpoints, passport control, check-in areas, and terminals are typical airport problems. Slow-moving queues frustrate travelers, waste revenue, and create a negative brand image.

In addition, many airports laid-off personnel during the COVID-19 pandemic and are dealing with staff shortages and reduced operational efficiency.

Many airports have embraced digital signage to reassure travelers that it is safe to return to air travel and offer pertinent information to improve the passenger experience. As it stands, [90% of travelers](#) are pleased with digital destination services. Also, internal screens enhance internal communication and attract new hires in a competitive labor market.

What Is Digital Signage?

Digital signage is the deployment of **display technologies** like LED, projection, and LCD to show **digital content** like animations, text, videos, and images. Airport digital signage describes the use of digital screens to **broadcast information** to travelers and staff.

Most large airports use different forms of digital signage, including video walls, interactive tablets, and touchscreen kiosks. In practice, these solutions simplify check-in processes, enhance navigation, and enrich a passenger's experience.

To get started with this technology, you need a digital screen, media player, digital signage software, or digital content. The software helps you create, schedule, and upload content while the media player feeds your displays with information.

What are FIDS?

Flight Information Display Systems are a sophisticated computer system that controls screens placed throughout an airport. These screens display real-time arrivals and departures to inform travelers and people picking up their loved ones. Large airports deploy flight boards on terminals, and each line on the display has comprehensive information that includes:

- Flight number
- Flight's name, logo, or IATA/ICAO name
- Flight's origin and destination
- Take-off and expected landing time
- Flight status
- Check-in counter
- Gate
- Aircraft type
- Baggage belt
- Block on
- Airline's name

By displaying real-time flight information to passengers, flight boards ease airport navigation. Additionally, state-of-the-art systems use multi-lingual display technology to eliminate language barriers.

Flight	Airline	Scheduled	Actual	Destination	Status	Delay	Terminal	Gate

Components of a FIDS Screen

A FIDS screen needs **five components** to work:

Display

Many airports use commercial-grade digital screens engineered for longevity with advanced resolution options. Before you buy a screen, consider the most appropriate size and explore touchscreen displays if you desire immersive experiences.

Media Player

A media player is a compact device that pushes multimedia content to a network of displays. If you run a complex digital signage system, install a powerful media player with a large storage capacity and processing power.

Software

A robust content management system is vital for airport digital signage as it lets you control the digital content from any location via a web interface. Invest in [digital signage software](#) with pre-built templates and drag-and-drop features for easy content deployment.

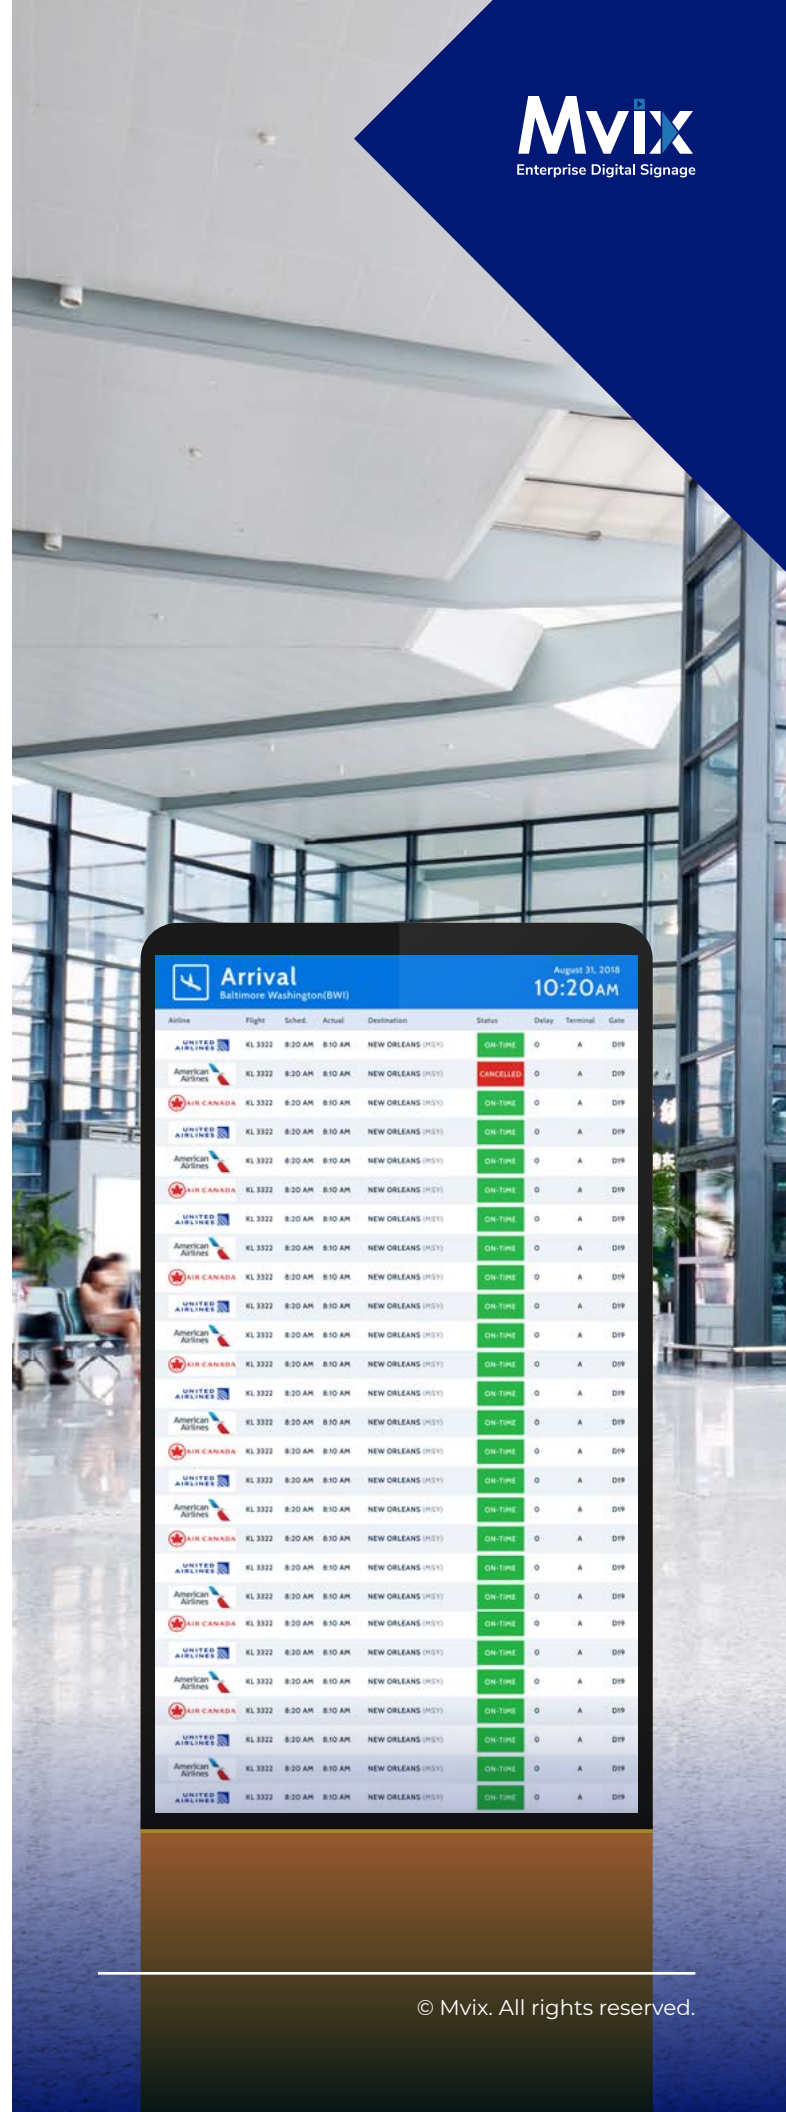

Mounts

The primary purpose of a mounting solution is to hold up your screen for as long as needed. Additionally, the mount should make it easy to pull out screens for servicing or change the angle of your display. Your options include flat, tilt, full-motion, ceiling, and video wall mounts.

Enclosures

A sleek, custom enclosure makes your display stand out and offers protection against theft, vandalism, and weather. Moreover, sturdy enclosures grant quick access to media players and power buttons, provide ventilation, and conceal display bezels.

Use Cases

Airport flight boards have versatile uses in any chaotic environment, including:

Flight Information Boards

Flight information boards at airport terminals deliver passenger information that reduces confusion among crowds. With one glance, a traveler sees a flight's name, number, origin, destination, gate number, and expected departure and landing times. Moreover, passengers stay up to date with delays and cancellations.

Welcome Boards

Large digital displays with welcome messages creates a great first impression among travelers. Videos and colorful animations on welcome boards excite audiences about their travel.

Check-in Counter Displays

Digital check-in screens present traffic notifications and flight information for seamless airport management. In addition, the displays broadcast baggage limits, security protocols, seating upgrades, and special airline offers.

Baggage Claim Displays

An airport's baggage claim area receives a lot of traffic as travelers wait for their luggage. People waiting in this location are the ideal audience for advertisements and branded content.

Baggage Claim				
		24.05.21 05:12		
Flight	Airline	Baggage	Direction	
CC 457	DELTA	2		→
AA 457	Aer Lingus	4	12	↑
KL 457	DELTA	6		→
PL 457	Aer Lingus	4	6	↑

Wayfinding Signage

Usually, travelers feel rushed and confused in an airport because they can't find clear directions to boarding gates, check-in counters, and car parks. Luckily, digital wayfinding systems at strategic locations guide a traveler's entire journey to and from the plane. Consequently, passenger flow is more streamlined, and customer service is enhanced.

Digital Menu Boards for Restaurants

Typically, travelers wander to airport restaurants for a quick meal or snacks before boarding their flights. Digital menu boards display product offerings and pricing in captivating graphics that entice customers and increase sales.

POIs: Point of Interest Displays

More airports are becoming tourist destinations, complete with libraries, cultural centers, gift shops, and indoor playgrounds. Digital displays promote your airport's amenities in eye-catching and irresistible graphics.

Break Room Signage for Employees

Airports are operating in an increasingly competitive labor market. Currently, employees value engagement, recognition, and effective communication in the workplace. With break room signage, you ensure that your employees are constantly informed with real-time operation updates. What's more, you can highlight employee achievements or celebrate a department for surpassing its targets.

Interactive Kiosks

Interactive kiosks automate many airport activities such as printing a boarding pass, requesting seating changes, and checking in. Further, travelers interact with an airport's digital map on digital kiosks and receive directions to boarding gates, restaurants, restrooms, and other amenities.

FIDS Features

FIDS systems are not created equal, and you want a **powerful platform** that fulfills your internal and communication needs. Some features to look for include:

- Display real-time flight information
- Offers both touch and touchless options
- Includes hundreds of customizable templates
- Alternate flight information with advertisements, emergency messages, and announcements
- Highlight airport amenities like shops, restaurants, banks, and ATMs
- Show floor plans to check-in counters, car parks, baggage claim centers, terminals, passport control, and other areas
- Display transit information that informs a traveler's journey from the airport, such as weather, live traffic, and Uber and LYFT waiting times
- Emergency override
- Remote monitoring and reporting

The Anatomy of a FIDS Screen: What Should Be on Your Zones?

Multi-zone layouts let airports show a variety of content on the same display. The multiple sections show:

Custom Branding

Branding elements on airport digital signage provide a sense of place. Specifically, show your name, logo, colors, slogan, or graphics at the uppermost part of the digital display to reinforce branding.

Time, Date, and Weather

Time, date, and weather updates help commuters track boarding times, departures, and arrivals and plan their journeys from the airport.

Advertising

Travelers spend much time waiting in airports, making them premium advertising venues for brands. So, sell ad space to retailers on your digital screens and enjoy increased revenue.

Flight Information

Primarily, airports get people to where they need to go. Hence, showing critical information like flight number, name, destination, aircraft type, airline, and flight status is an airport sign's main purpose.

Real-Time Updates

Airport timetables change by the minute while plane delays and cancellations are common. As such, airports need to broadcast real-time updates like changes with boarding gates or baggage belts to minimize chaos.

Arrivals and Departures

Digital screens in busy airports show departure and arrival times and provide up-to-date information on a flight's status.

ROI

Airport digital signage broadcasts **real-time data** about delays, waiting times, and schedules, thereby **enhancing the passenger's journey**. The benefits of a digital FIDS solution include:

Efficient and Fast Way to Share Flight Information

Static posters are impractical for airports as they must share real-time flight information to guide departing and arriving commuters. A FIDS system directly pulls updates from the Airport Operational Database (AODB) and instantly publishes flight information on airport signs.

Makes the Travel Experience Efficient for Airlines

Delays caused by ground congestion cost money and waiting for people to find check-in counters, passport control, or boarding gates affects an airline's operation. Digital screens at strategic locations supply commuters with wayfinding and flight information to ensure they board their flights at the right time.

Advertisement

Colorful animations and graphics are captivating, and they make your digital signs invaluable real estate for advertising. In addition to promoting your amenities, sell ad space to large brands and small retailers.

Promotes Security

Digital screens enhance security by displaying security instructions in clear formats. When a traveler gets to a security checkpoint, they know what to do and are aware of restricted items.

Offer Staff Assistance

Airport operational staff get overwhelmed by large crowds, resulting in long queues of equally-frustrated travelers. Fortunately, digital screens reduce the workload on airport workers by displaying directions, security protocols, and airline instructions. As a result, travelers are more cooperative, queues move quicker, and the staff enjoys better job satisfaction.

Reduced Costs

The major disadvantage of static displays is that you must print flyers to display new information. These printing costs quickly add up in transportation hubs since they push a lot of internal and external information. In contrast, digital signage accommodates as many content updates as possible by the second, minute, or day.

Quick Content Changes

Flight delays and emergency messages are among the critical information airports display daily. Luckily, a powerful FIDS software lets you make real-time content changes that reduce chaos in the airport.

A Stress-Free Journey

Digital wayfinding guides passengers through terminals, baggage belts, boarding gates, and other airport areas for a stress-free journey. Additionally, leverage outdoor digital displays to guide commuters as soon as they leave their taxi and direct arriving passengers to car parks.

Content Apps

Digital signage content apps feed your displays with **professional**, **relevant**, and **rich content**. The top options include:

Airport Display - At Counter

Display up-to-date flight information, visa procedures, and security protocols.

Airport Display - At Belt

Digital displays help travelers track their bags to reduce cases of lost baggage

Airport Baggage Claim

Broadcast baggage location information to help commuters find the right conveyor.

Alerts

Transmit CAP alerts, emergency messages, and safety instructions in case of bad weather, active shooter, fires, and other emergencies.

Analytics

Display KPIs to motivate employees and track company performance.

Live Transit

Show live wait times for planes, shuttle buses, and taxis.

Traffic

Track local traffic conditions and highlight potential snarl-ups.

Weather

Stream current weather conditions and forecasts for different destinations.

RSS Feeds

RSS feeds offer automated content for news, sports, music videos, and food channels.

Social Media

Excite commuters with Instagram, TikTok, Twitter, and YouTube feeds.

Wayfinding

Display navigational information for improved traffic control

Smart Playlist

Easy way to program your advertising campaign.

SERVICES

Digital signage providers offer a range of services to **ease** the deployment of **FIDS systems**. The essential services are:

Installation

Installation support by professional technicians results in quick digital signage deployments. Our Mvix consultants provide on-site quality support during installation to optimize internal and external communications.

Signature Care

Our signature-care support includes 24-hour technical assistance on phone and web, a lifetime warranty on media layers, and free device replacements every three years. Moreover, depending on your digital signage requirements, we customize support packages.

Content Design

Fresh and informative digital signs excite and fascinate travelers and keep them glued for long enough to consume your content. Our content designers at Mvix have extensive experience in graphic design, coding, and videography, and they feed your screens with engaging, customized, and targeted content for maximum engagement.

Implementation

A digital signage strategy helps you enjoy the full benefits of FIDS systems. Our implementation consultants work with you to develop digital signage goals, determine ways to measure ROI and mobilize your resources for seamless deployment.

Personalized Training

Our software consultants help you leverage digital signage to reach your communication goals via online tutorials and live classes. Further, you get free access to hundreds of articles, which help you learn at your own pace.

SUCCESS STORIES

Trenton-Mercer Airport

Trenton-Mercer Airport connects Mercer County to large US cities like Chicago, Atlanta, Orlando, and Miami. As New Jersey's third-busiest airport, Trenton-Mercer struggled to capture the attention of consumers and business travelers.

Previously, the airport used static ads to reach customers, but commuters ignored these dull displays, despite spending 2.5 hours in the airport. The airport needed dynamic digital signs to captivate commuters and increase advertising revenue. For this purpose, Trenton-Mercer installed a flight information system powered by Mvix and managed by CMA.

The robust platform offered by Mvix empowers CMA to

make remote, real-time changes to flight information, delays, and cancellation. In the past, updating ads was a costly and time-consuming process. With the Mvix platform, CMA schedules automatic updates as far ahead as needed and customizes notifications for different times of the day. In addition to flight information, CMA feeds the screens with news, live traffic, entertainment, emergency messages, and weather updates.

Previously, the airport only managed to have one advertiser for every ad space, which limited its advertising revenue. Digital signage offers unlimited ad space, and the airport has developed more partnerships with businesses in the central business district.

If you would like to read the full Success Story, you can view and download it [here](#).

Digital Signage for Airports

The versatility of digital signage systems makes them valuable communication tools for airports. The uses of airport digital signage are endless, from wayfinding signs, break room displays, video walls, and interactive

kiosks with self-check-in services. Ultimately, digital signs reduce waiting times, simplify queue management, increase ad revenue, and streamline security.
